SUMMARY

Junior full-stack developer and BS Computer Science graduate (University of the Philippines Cebu, July 2026). Builds full-stack web applications in JavaScript and TypeScript (React, Next.js, Node.js/Express) with PostgreSQL, plus PHP (Laravel) and Python. Currently doing remote development on production SaaS applications: Stripe billing fixes, authentication hardening, deployment pipelines and a hosting migration. Uses Claude Code daily and works through Git pull requests with CI. Open to Software Developer, Web Developer and QA Engineer roles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, SQL, HTML5/CSS3, Liquid
Frontend: React, Next.js, React Native (Expo), Tailwind CSS, responsive and accessible UI
Backend: Node.js, Express, Laravel (PHP), REST APIs, authentication (sessions, JWT, OAuth), Stripe webhooks
Databases: PostgreSQL, Prisma, SQLite, MongoDB, Supabase (basic)
Tools & Platforms: Git and GitHub (pull requests, branch protection, GitHub Actions CI), Docker, Vercel, Railway, Shopify, Playwright, Vitest/Jest
AI tools: Claude Code (daily), LLM APIs (Gemini, Groq), local models via Ollama
Practices: Code review, automated testing, QA test plans, technical documentation (ADRs, runbooks)

TRAINING & COURSES

- CompTIA SecAI+ (CY0-001) course, ITU Online (June 2026)
- ISC2 Certified in Cybersecurity (CC) course track, Skillsoft: security governance, core principles, access controls, network security, incident response
- AWS Cloud Practitioner course, Skillsoft (2023): cloud security, access management, compliance
- AI in the Workplace & ChatGPT Prompt Engineering (Skillsoft)

EXPERIENCE

Confidential SaaS clients (remote) Jul 2026 – Present
Full-Stack Developer · Cebu City, PH

- Migrating a multi-tenant SaaS (Next.js, TypeScript, Prisma, PostgreSQL) from Vercel to Azure: environment readiness, a GitHub Actions deployment pipeline and the cutover runbook; also shipped a recovery path for data imports that got stuck mid-run.
- Fixed Stripe subscription lifecycle bugs on a SvelteKit and TypeScript SaaS using Stripe test clocks and decline-card testing, and found the deployed webhook subscribed to only 2 of the 6 events the code relied on, which was corrected.
- Built a Google OAuth token watchdog and authentication fixes (session-expiry redirect, logout revocation), and caught a rate-limiter logic bug in code review that let requests slip past the advertised wait.
- Built a document library and a drag-and-drop decision board with an audit trail for an internal AI-agent workspace (Next.js, Prisma).
- Added Stripe webhook idempotency tests, environment-driven staging isolation and a CSV import fix across three Python apps (Flask and FastAPI).

Lexmark International (now Xerox) Jun 2025 – Jan 2026
Asset Management Specialist Intern · Cebu City, PH

- Built and maintained internal tracking tools for enterprise hardware asset lifecycle management, improving documentation accuracy and reporting.
- Coordinated with cross-functional IT teams to ensure data consistency across systems; supported process documentation and operational reporting.

PROJECTS

Personal

ShelfStock July 2026

Next.js · TypeScript · Node.js · Express · PostgreSQL · Tailwind CSS · Recharts

- Full-stack e-commerce platform with multi-currency pricing, debounced server-side search/filtering/pagination, and transactional checkout with row-level locking to prevent overselling.
- Row-level authorization, price snapshotting for historical order accuracy, and an admin analytics dashboard (Recharts) on SQL aggregates; Dockerized with CI and deployed on Vercel with Postgres on Neon.

Laravel To-Do App June 2026

Laravel · PHP · Blade · Tailwind CSS

- Task manager on Laravel 12 with Breeze authentication (registration, login, password reset), a controller that enforces per-user ownership on every action, and migrations for due dates and priorities.

Pulse (WebRTC Peer-to-Peer) June 2026

Next.js · WebRTC · Prisma · PostgreSQL

- Graded take-home assessment on an existing codebase: fixed 4 bugs, then found and fixed 4 security issues (session impersonation through guessable IDs, mailbox draining, a spoofable sender field, missing rate limiting) with a severity-ranked write-up.

Nexus CRM Aug 2026

Next.js · TypeScript · Prisma · Tailwind CSS · Gemini/Groq AI

- Full-stack AI-powered CRM with pipeline/deal kanban, contact management, and an AI layer for lead scoring, relationship summaries, and follow-up drafting (Gemini/Groq), with prompt-injection mitigation.
- Role-based access, audit logging, 390+ unit tests and Playwright end-to-end tests in GitHub Actions CI with CodeQL; AI provider failover from Gemini to Groq with structured JSON output and an eval suite that runs without API keys.

Kitchen Line Supply (Shopify Theme) Aug 2026

Shopify · Liquid · Online Store 2.0 · JavaScript · CSS

- Custom Shopify Online Store 2.0 theme built from scratch: schema-driven sections, product metafields and metaobjects, an AJAX cart, and full progressive enhancement (works without JavaScript).
- Measured Lighthouse Accessibility 100, SEO 100 and zero cumulative layout shift on every page with third-party review-app JavaScript loaded; mobile performance sits around 70 to 75, bounded by Shopify platform scripts. Catalog seeded through the Admin GraphQL API.

ShelfStock Companion (Mobile App) Aug 2026

React Native (Expo) · TypeScript · TanStack Query

- Android admin app for ShelfStock (Expo, TypeScript): barcode scanning, an offline product cache, and an offline write queue that replays queued changes safely using idempotency keys, against the ShelfStock REST API.

AmBot (Quantitative Trading Research) Jul 2026

Python · ccxt · pandas · Backtesting

- Vectorized backtesting engine evaluating 7 trading strategies across crypto and 36 years of equities data, with Monte Carlo validation and strict train/test separation; none beat buy-and-hold out of sample.

Ops Tools Suite (concept demos) Jul 2026

HTML · CSS · JavaScript (vanilla)

- 5 zero-dependency web apps (timezone scheduler, PH payroll calculator, JD-candidate matcher, engagement portal, workstation-compliance dashboard) in plain HTML, CSS and JavaScript, with no framework and no build step.

Individual

IoT Edge Security Framework Jun 2026 (Thesis)

Python · Decision Tree · AES/ChaCha20 · Edge Computing · Raspberry Pi

- Context-aware Smart Home IoT security framework: a Decision Tree classifier for threat detection with adaptive AES/ChaCha20 switching; across 180 simulation runs, 63.4% lower mean response time and 27.4% less energy than a static-encryption baseline.

EDUCATION

University of the Philippines Cebu Graduated July 2026

Bachelor of Science in Computer Science · College Scholar — 2nd Sem AY 2023–24 & 2024–25

INVOLVEMENT

Technical Volunteer: MSG 2026, Geeks on a Beach 2024; Lighting Technician for school events, 2024 to 2025.
