TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, SQL, HTML5/CSS3, Liquid
Frontend: React, React Native (Expo), Next.js, Tailwind CSS, HTML5/CSS3
Backend: Node.js, Express, Laravel (PHP), REST APIs, authentication (sessions, JWT, OAuth), Stripe webhooks, API integration
Databases: PostgreSQL, Prisma, SQLite, MongoDB, Supabase (basic)
Tools & Platforms: Git and GitHub (pull requests, branch protection, GitHub Actions CI), Docker, Vercel, Railway, Shopify, Playwright, Vitest/Jest, VS Code
AI tools: Claude Code (daily), LLM APIs (Gemini, Groq), local models via Ollama
Practices: Code review, automated testing, QA test plans, technical documentation (ADRs, runbooks)
Spoken Languages: English (Fluent/C1), Filipino (Native), Chavacano (Conversational), Japanese & Spanish (Basic)

TRAINING & COURSES

CompTIA SecAI+ (CY0-001) course — ITU Online (June 2026)

ISC2 Certified in Cybersecurity (CC) course track — Skillsoft

- Security Governance, Policies, & Controls
- Incident Response
- Core Security Principles & Risk Management
- Logical Access Controls
- Physical Access Controls
- Business Continuity Planning
- Present Threats & Network Security Controls
- Networking & Security Infrastructure
- Data Security & System Hardening
- Security Best Practices & Security Awareness

AWS Cloud Practitioner course — Skillsoft (2023)

- Components & Resources for Security
- Access Management
- Overview of Cloud Security
- Shared Responsibility & Compliance
- Migration to the AWS Cloud & Cloud Economics
- Benefits & Design Principles of the AWS Cloud
- Automation & Managed Services

AI & ChatGPT Professional Development — Skillsoft

- The Role of ChatGPT in Shaping Our Future
- Ethical, Privacy, & Intellectual Property Considerations for ChatGPT
- ChatGPT's Impact on Various Industries
- Finetuning Your ChatGPT Prompts
- ChatGPT Prompt Engineering Examples & Use Cases
- ChatGPT & Its Practical Use Cases
- AI in the Workplace
- Maximizing Customer Service with AI
- Responsible Use of AI

EXPERIENCE

Confidential SaaS clients (remote) Jul 2026 – Present

Full-Stack Developer · Cebu City, PH

- Migrating a multi-tenant SaaS (Next.js, TypeScript, Prisma, PostgreSQL) from Vercel to Azure: environment readiness, a GitHub Actions deployment pipeline and the cutover runbook; also shipped a recovery path for data imports that got stuck mid-run.
- Fixed Stripe subscription lifecycle bugs on a SvelteKit and TypeScript SaaS using Stripe test clocks and decline-card testing, and found the deployed webhook subscribed to only 2 of the 6 events the code relied on, which was corrected.
- Built a Google OAuth token watchdog and authentication fixes (session-expiry redirect, logout revocation), and caught a rate-limiter logic bug in code review that let requests slip past the advertised wait.
- Built a document library and a drag-and-drop decision board with an audit trail for an internal AI-agent workspace (Next.js, Prisma).
- Added Stripe webhook idempotency tests, environment-driven staging isolation and a CSV import fix across three Python apps (Flask and FastAPI).

Lexmark International (now Xerox) Jun 2025 – Jan 2026

Asset Management Specialist Intern · Cebu City, PH

- Developed and maintained internal tracking tools to streamline enterprise hardware asset documentation and lifecycle management.
- Coordinated with cross-functional IT teams to ensure accurate records across systems, improving data consistency and operational reporting.
- Supported data reporting workflows and process documentation for the asset management department.

Family Business – Rice Trading High School – Present

Manager & Operations Support · Zamboanga City, PH

- Managed day-to-day operations, inventory tracking, and customer relations for a family-run rice trading business.
- Coordinated logistics, warehouse work and delivery operations; continued to assist during academic breaks.

PROJECTS

Personal

ShelfStock July 2026

Self-Built · Live Demo · Next.js · TypeScript · Node.js · Express · PostgreSQL · Tailwind CSS · Recharts

- Built and deployed a full-stack e-commerce platform (Next.js/Express/PostgreSQL) with live multi-currency pricing and server-side search, filtering, and pagination using debounced, cancellable requests (AbortController).
- Implemented transactional checkout with row-level locking (SELECT ... FOR UPDATE) to prevent overselling, row-level authorization on order endpoints, and price snapshotting (price_at_purchase) to preserve historical order accuracy.
- Built an admin-only analytics dashboard (Recharts) backed entirely by SQL aggregates for revenue-over-time and top-product reporting; containerized with Docker Compose and CI, deployed on Vercel with Postgres on Neon.
- Added per-page SEO (Open Graph and Twitter cards, canonical URLs, JSON-LD product data with script-breakout escaping, generated sitemap and robots), security headers with a report-only Content Security Policy, and 150+ automated tests with Dockerized end-to-end runs in CI.

Pulse (WebRTC Peer-to-Peer) June 2026

Technical Assessment (Take-Home Project) · Next.js · WebRTC · Prisma · PostgreSQL

- Graded take-home assessment on an existing codebase: fixed 4 bugs (including stale presence and WebRTC ICE-candidate ordering), then found and fixed 4 security issues (session impersonation through guessable IDs, mailbox draining, a spoofable sender field, missing rate limiting) with a severity-ranked write-up.
- Backend built with PostgreSQL and Prisma ORM.

GitHub Pulse June 2026

Self-Built · Next.js · TypeScript · GitHub REST API

- Built a developer analytics dashboard consuming the GitHub REST API to surface repository and contributor insights.

Local AI Agent (Hermes-style) July 2026

Self-Built · Python · Ollama · ChromaDB · sentence-transformers

- Built a local, privacy-preserving AI agent combining a local LLM with retrieval and web search tools; implemented semantic memory using ChromaDB and sentence-transformers, with DuckDuckGo search for live information retrieval.

Laravel To-Do App June 2026

Self-Built · Laravel · PHP · Blade · Tailwind CSS

- Built a task manager on Laravel 12 with Breeze authentication (registration, login, password reset), a controller that enforces per-user ownership on every action, and migrations for due dates and priorities.

Nexus CRM Aug 2026

Self-Built · Live Demo · Next.js · TypeScript · Prisma · SQLite · Tailwind CSS · Radix UI · Recharts · Gemini/Groq

- Built a full-stack AI-powered CRM (Next.js 16 App Router, Server Actions) with pipeline/deal kanban, contact & company management, activity timeline, and task tracking.
- Integrated an AI layer for lead scoring, relationship summaries, and follow-up drafting via Gemini/Groq with prompt-injection mitigation and rate-limited calls; falls back to rule-based heuristics with no API key.
- Implemented role-based access, session-based auth and an audit log; 390+ unit tests plus Playwright end-to-end tests in GitHub Actions CI with CodeQL; AI provider failover from Gemini to Groq with structured JSON output and an eval suite that runs without API keys. Deployed on Vercel.

Kitchen Line Supply (Shopify Theme) Aug 2026

Self-Built · Live Demo · Shopify · Liquid · Online Store 2.0 · JavaScript · CSS

- Built a custom Shopify Online Store 2.0 theme from scratch (no forked or purchased theme), covering all core templates, schema-driven custom sections, and structured content via product metafields and a metaobject.
- Implemented progressive enhancement throughout, an AJAX cart via the Section Rendering API, an accessible variant picker, and URL-first filtering/sorting, so every feature works without JavaScript and degrades gracefully with it; verified filter and sort correctness with scripting disabled.
- Measured Lighthouse Accessibility 100, SEO 100 and zero cumulative layout shift on every page, including with a third-party reviews app installed; mobile performance sits around 70 to 75, bounded by Shopify platform scripts. Seeded the full product catalog through the Admin GraphQL API for reproducibility.

ShelfStock Companion (Mobile App) Aug 2026

Self-Built · React Native (Expo) · TypeScript · TanStack Query

- Built an Android admin app for ShelfStock (Expo, TypeScript) with barcode scanning (expo-camera), an offline product cache via TanStack Query with AsyncStorage persistence, an offline write queue that replays queued changes using idempotency keys, and secure credential storage.
- Extended ShelfStock's backend with a dedicated companion API (barcode lookup, device token registration and order notification endpoints) to support the mobile client.

Portfolio Website Aug 2026

Self-Built · Live Demo · React · TypeScript · Vite · Tailwind CSS

- Built an interactive, desktop-OS-style portfolio site with window management, a 3D project showcase ("Design Lab") using CSS 3D depth cards, and full keyboard accessibility and focus management.
- Hardened with hCaptcha bot protection and fuzzy search (Fuse.js); deployed to GitHub Pages via an automated build pipeline.

AmBot — Quantitative Trading Research Pipeline Jul 2026

Self-Built · Python · ccxt · pandas · Backtesting · Monte Carlo

- Built a vectorized backtesting engine evaluating 7 trading strategies (momentum, mean-reversion, scalping, market-making, volatility-targeting) across crypto and 36 years of equities data.
- Measured performance via Sharpe ratio, CAGR and drawdown with strict train/test separation and Monte Carlo validation; the final result was that none of the strategies beat buy-and-hold out of sample.
- Identified and corrected three of the pipeline's own methodology errors — a spurious correlation, a clock-skew latency miscalculation, and a confounded adverse-selection result.

Ops Tools Suite (concept demos) Jul 2026

Self-Built · HTML · CSS · JavaScript (vanilla, zero-dependency)

- Built 5 self-contained web apps as concept demos: a timezone/DST scheduler, a PH statutory payroll calculator, a JD-to-candidate matcher, an employee engagement/eNPS portal, and a workstation-compliance dashboard fed by a PowerShell audit script.
- Designed with no build step or backend dependency, using localStorage-seeded demo data and a shared design system for fast, free hosting.

RAGbot (DocChat) Jun 2026

Self-Built · Python · LangChain · ChromaDB · sentence-transformers · Streamlit

- Built a retrieval-augmented generation chatbot that answers questions over uploaded documents and URLs, with inline source citations.

- Implemented ingestion for PDFs and web pages (PyPDF, trafilatura, BeautifulSoup), embedding with sentence-transformers into a ChromaDB vector store, and LLM responses via LangChain + Groq.

Group Projects

Sportal Jun 2025

Team Project · Next.js · TypeScript · Prisma · MongoDB · NextAuth · Cloudinary · REST APIs

- Built a full-stack tournament management platform with automated bracket generation (round-robin & single-elimination), team registration, and payment confirmation workflows.
- Designed MongoDB/Prisma schemas and implemented REST APIs for all core features; integrated Google & GitHub OAuth via NextAuth; added Leaflet for venue maps and Cloudinary for image uploads.
- Deployed on Vercel; served as project lead, coordinating sprint planning and task distribution across the team.

Toxic Comment Detector Feb 2025

Team Project · Python · scikit-learn · NLTK · TF-IDF · Pandas · Streamlit · Jupyter

- Trained binary classifiers on the Jigsaw Toxic Comment dataset (~160K comments) using NLTK preprocessing and TF-IDF vectorization.
- Compared Logistic Regression and Naive Bayes via cross-validated F1 on imbalanced data; evaluated with ROC-AUC and balanced accuracy.
- Deployed interactive inference UI via Streamlit with confidence scoring; packaged model and vectorizer for production-style prediction.

Minna no Nihongo May 2025

Team Project · React · Vite · JavaScript · Tailwind CSS · Zustand · Web Speech API · PWA

- Progressive web app with 8 textbook chapters, ~440 vocabulary entries, 4 quiz modes, and hiragana practice — deployed to Netlify for class use.
- Integrated Web Speech API with romaji-to-hiragana conversion for cross-platform Japanese pronunciation practice; implemented offline PWA support and progress tracking with Zustand.

HoneyOS May 2025

Team Project · HTML · CSS · JavaScript · Neutralino.js

- Web-based desktop OS interface with a hexagonal-themed UI featuring an integrated text editor, file explorer, camera, and music player.
- Implemented dark/light mode, window management, and system controls using Neutralino.js for desktop capabilities.

Dungeon Descend May 2025

Team Project · Python · Pygame · Go (partial port)

- Built a turn-based dungeon-crawler card game with a card/energy/combat system, custom sprites, and audio.
- Began porting the core engine to Go to explore performance and language tradeoffs.

Individual

IoT Edge Security Framework Jun 2026

Special Project / Thesis · Python · Decision Tree · AES/ChaCha20 · M/M/4 Queueing · Raspberry Pi

- Designed a context-aware security framework for Smart Home IoT environments using lightweight machine learning and adaptive security enforcement.
- Implemented a Decision Tree classifier that dynamically adjusts security actions based on device criticality, threat level, resource state, and network connectivity.
- Integrated adaptive AES/ChaCha20 cryptographic switching and M/M/4 queueing-based concurrency modeling; across 180 simulation runs achieved a 63.4% reduction in mean response time, 27.4% lower energy consumption, and 38.1% improved accuracy-per-joule vs. a static-encryption baseline.

EDUCATION

University of the Philippines Cebu Graduated July 2026

Bachelor of Science in Computer Science · College Scholar — 2nd Sem AY 2023–24 & 2024–25

Relevant Coursework:

Software Engineering · Web Engineering · Data Structures · File Processing & Database Systems · Design & Analysis of Algorithms · Operating Systems · Introduction to AI · Data Communication & Networking · Machine Learning · Image Processing · Introduction to Computer Security · Project Management · Technopreneurship · Agent Based Modeling

LEADERSHIP & INVOLVEMENT

- Technical Volunteer — MSG 2026; also served as Runner, Registration Team, and Manpower Volunteer at MSG 2022, 2023, 2024.

- Volunteer — Geeks on a Beach 2024 Tech Conference.
- Lighting Technician for school events (2024–2025); Technical & Talents Volunteer — Mx. Komsai (2023–2025) and Otakufest (2025–2026).
